Object: NGC 7086 (H32) -6
Type: OC Mag: 10.19 Size: 9'
Date: 11/14/04 Time: 2100 - 2124 CST
T/S(1-10): 7.0/5.0 Eyepiece/X: 12.5mmP/122x
Fil: — Tel: 12.5" Dob

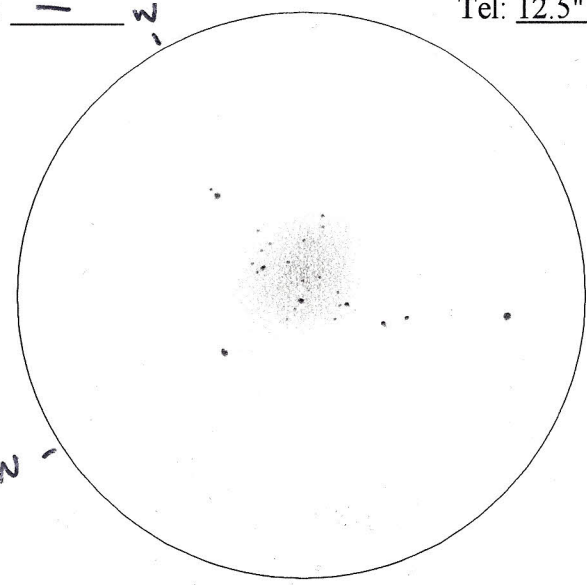

Another nice collection of stars of varied magnitude. A brighter star near the center with a hazy patch of dim, unresolved stars just to the SE.

Object: NGC 7128 (H40) -7
Type: OC Mag: 11.50 Size: 3.1'
Date: 11/15/04 Time: 1936 - 1955 CST
T/S(1-10): 7.5/5.0 Eyepiece/X: 12.5mmP/122x
Fil: — Tel: 12.5" Dob

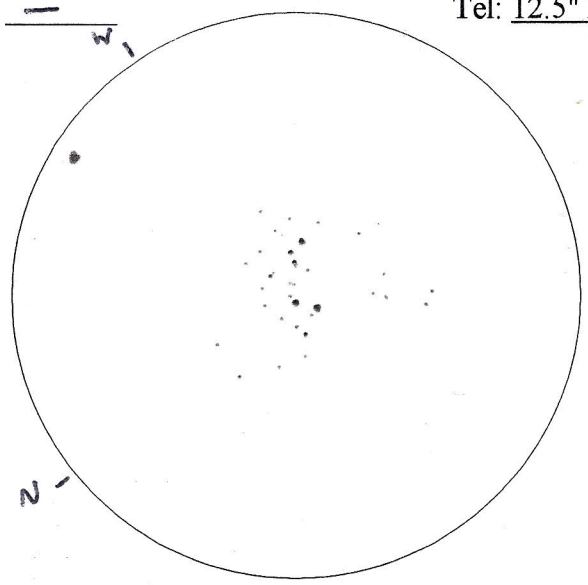

A little circlet of stars superimposed on a hazy unresolved patch. The lucida of the cluster is on the SE rim of the circlet like a diamond on a ring, or maybe a ruby, since it is reddish!

Object: NGC 7142 (H66) -7
Type: OC Mag: 12.12 Size: 4.3'
Date: 11/15/04 Time: 2026 - 2044 CST
T/S(1-10): 7.5/5.0 Eyepiece/X: 26mmP/60x
Fil: — Tel: 12.5" Dob

Fairly large. A smattering of dim stars against a hazy, unresolved background. A curving chain of brighter stars runs through the cluster from NW to SE.

Object: NGC 7160 (H67) -8
Type: OC Mag: Br*7.04v Size: 7'
Date: 11/15/04 Time: 2118 - 2135 CST
T/S(1-10): 7.5/5.0 Eyepiece/X: 12.5mmP/122x
Fil: — Tel: 12.5" Dob

A curious little grouping of stars. Two bright ones near the middle and three slightly dimmer ones to the SW. A sprinkling of dimmer stars all around.
