 Size Estimate: ?
 No. Of AV Galaxies: 1
 No. Of DV Galaxies: 1

Description (Pattern? Distribution even or uneven? Galaxies superimposed or signs of interaction? Nuclei, dust lanes, spiral arms? Estimate on AV scale):

I could only see the brightest member of this group, although it did appear elongated, probably due to the close proximity of another member galaxy.

NGC 7609 - Brightest member. Visible with direct vision (stellar nucleus). Appeared elongated in the SE direction, probably due to the nearness of an unnamed galaxy (element c in the GG&C book image).

? (c) - AV3. Visible as an elongation of NGC 7609.
