Description (Pattern? Distribution even or uneven? Galaxies superimposed or signs of interaction? Nuclei, dust lanes, spiral arms? Estimate on AV scale): one large central galaxy (N1129) with five smaller galaxies surrounding. MCG +7-7-3 superimposed on N1129.

- N1129 - D.V. - Large, oval, cloudlike halo becoming gradually brighter toward the center with dim stellar nucleus.
- N1131 - AV2 - Small, round halo w/ dim stellar nucleus.
- CGCG 539-126 AV2 - Fairly small even brightness halo w/ dim stellar nucleus.
- IC 265 157 AV2 - Small, round halo w/ dim stellar nucleus.
- PGC 10962 AV5 - Very dim streak w/ dim stellar nucleus. Glimpsed a couple of times.
- MCG +7-7-3 AV2 - Appears only as a dim stellar nucleus to the SW of NGC 1129 nucleus. Superimposed on N1129.
