

GALAXY GROUPS & CLUSTERS OBSERVATION RECORD

Date: 3 October 2013
 Time Started: 2050 CDT Time Finished: 2125 CDT
 Location: H,T
 Weather: clear
 Transparency: (1-5) 4/5 Seeing: (1-5) 3/5
 Faintest Naked Eye Star: _____
 Telescope: 18" Obsession - f/4.5 - f.l. 81"
 Eyepiece: 9mm Televue Nagler Type 6
 Magnification: 231x FOV: 21.3'

Object ID: Hickson 88
 Coordinates: 20 52.6 -05.7
 Constellation: Aqr
 Magnitude Range: 13.2 - 14.5
 Size Estimate: 5'
 No. Of AV Galaxies: 3
 No. Of DV Galaxies: 0

Description (Pattern? Distribution even or uneven? Galaxies superimposed or signs of interaction? Nuclei, dust lanes, spiral arms? Estimate on AV scale):

A string of galaxies.

N6978 - AV2 - Very elongated streak running NW/SE w/ stellar nucleus.

N6977 - AV2 - Round w/ dim stellar nucleus

N6976 - AV3 - Small round spot

Could not see N6975
