Description (Pattern? Distribution even or uneven? Galaxies superimposed or signs of interaction? Nuclei, dust lanes, spiral arms? Estimate on AV scale): A right angle string of galaxies,

- N7184 - DV - much larger than the other galaxies, very elongated NE/SW w/ extended dim halo, core is bright and elongated. A dim field star at the NE end.
- N7185 - AV1 - slightly elongated NNE/SSW w/ dim stellar nucleus.
- N7180 - AV1 - Elongated NE/SW w/ brighter elongated core,
- N7188 - AV2 - Elongated, pretty dim.

Looked for but could not spot the brighter ring around N7184 that shows in photos.
